Reply to O.A. of June 28, 2005

Amendments to the Claims

The listing of claims will replace all prior versions, and listings, of claims in the application.

1. (Currently Amended) An interactive music apparatus comprising:

at least one actuator configured to transmit a signal upon actuation by a user;

- a voltage converter operably coupled to the at least one actuator, the voltage converter configured to convert the signal from the actuator into a data stream;
- a processing computer configured to receive the data stream from the voltage converter, the processing computer configured to convert the data stream into a first output signal and a second output signal, wherein the first and second output signals are directly related to the actuation by the user;
- a speaker configured to receive the first output signal and emit sound based on the first output signal; and
- an output <u>a visual</u> component, the <u>output visual</u> component configured to receive the second output signal and perform an action based on the second output signal, <u>wherein the action provides information about the sound</u>.
- 2. (Original) The apparatus of claim 1 wherein the sound and the action are interactive.
- 3. (Currently Amended) The apparatus of claim 1 wherein the output visual component comprises a web browser and a display monitor and the action comprises launching the web browser and displaying the browser on the display monitor.
- 4. (Original) The apparatus of claim 3 wherein the action further comprises displaying an image on the browser.
- 5. (Original) The apparatus of claim 3 wherein the action further comprises displaying sheet music on the browser.

Application Number: 10/606/817 Dkt. No.: 14716.01

Reply to O.A. of June 28, 2005

6. (Original) The apparatus of claim 3 wherein the action further comprises displaying text on the browser.

7. (Currently Amended) The apparatus of claim 1 wherein output visual component comprises a display monitor and the action further comprises displaying a keyboard on the

display monitor.

8. (Currently Amended) The apparatus of claim 1 wherein output visual component

comprises a display monitor and the action further comprises displaying a music staff on the

display monitor.

9. (Currently Amended) The apparatus of claim 1 wherein the output visual

component comprises a lighting controller and at least one light and the action comprises

displaying light at the at least one light.

10. (Original) The apparatus of claim 1 further comprising a MIDI sound card

operably coupled to the processing computer, the MIDI sound card configured to receive the first

output signal.

11. (Original) The apparatus of claim 10 further comprising a MIDI sound module

operably coupled to the MIDI sound card, the MIDI sound module configured to receive the first

output signal from the sound card, process the first output signal, and transmit the output signal

to the processing computer.

12. (Original) The apparatus of claim 1 further comprising a wireless transmitter

operably coupled to the at least one actuator and a wireless receiver operably coupled to the

voltage converter, the wireless transmitter configured to transmit wireless signals to the wireless

receiver.

13. (Currently Amended) An interactive music apparatus comprising:

at least one actuator configured to transmit a signal upon actuation by a user;

a wireless transmitter operably coupled to the at least one actuator, the wireless transmitter configured to transmit a wireless signal;

- a wireless receiver configured to receive the wireless signal from the wireless transmitter;
- a voltage converter operably coupled to the wireless receiver, the voltage converter configured to convert the signal from the actuator into a data stream;
- a processing computer configured to receive the data stream from the voltage converter, the processing computer configured to convert the data stream into a first output signal, a second output signal, a third output signal, and a fourth output signal, wherein the first, second, third and fourth output signals are directly related to the actuation by the user;
- a speaker configured to receive the first output signal and emit sound based on the first output signal;
- a display monitor configured to receive the second output signal and display an image based on the second output signal, the image configured to provide information about the sound and to be interactive with the sound;
- a web browser configured to receive the third output signal and launch on the display monitor, the browser configured to provide information about the sound and to be interactive with the sound; and
- a lighting controller configured to receive the fourth output signal and display light at the an at least one light, the lighting controller and the at least one light configured to provide information about the sound and to be interactive with the sound.
- 14. (Original) The apparatus of claim 13 further comprising a MIDI sound card operably coupled to the processing computer, the MIDI sound card configured to receive the first output signal.
- 15. (Original) The apparatus of claim 14 further comprising a MIDI sound module operably coupled to the MIDI sound card, the MIDI sound module configured to receive the first output signal from the sound card, process the first output signal, and transmit the output signal to the processing computer.

Application Number: 10/606/817 Dkt. No.: 14716.01 Reply to O.A. of June 28, 2005

16. (Currently Amended) A method of music performance and composition comprising:

actuating, by a user, transmission of a signal; converting the signal into a data stream;

converting the data stream at a processing computer into a first output signal and a second output signal, wherein the first and second output signals are directly related to the actuating transmission of the signal;

emitting sound at a speaker based on the first output signal; and performing an action at an output component based on the second output signal, wherein the action provides information about the sound.

- 17. (Original) The method of claim 16 wherein performing an action at an output component comprises launching a web browser on a display monitor.
- 18. (Original) The method of claim 16 wherein performing an action at an output component comprises displaying an image at a display monitor.
- 19. (Original) The method of claim 16 wherein performing an action at an output component comprises launching a web browser and displaying an image at a display monitor.
- 20. (Original) The method of claim 16 wherein performing an action at an output component comprises displaying lights at an at least one light with a lighting controller.
